Quality Assurance
Automated testing
Product deployment

How we do the job

Discovery

01 Initial call, gather what you have in terms of requirements

02 Analyze data, add missing technical documentation, create wireframes

**03** Project estimation, finalizing budget and development time

Design

01 Pick the style and color scheme

02 We build first few pages in several variants, so you can feel what option you like the most

03 Once one option is approved, we build rest of the design. You will have access to the design through Figma and will be able to control the process

04 Upon completion of the design, work is passed to the developers for implementation

Development

01 We split work on milestones, where each milestone reflects a logical part of the app

02 Each milestone is then split on several sprints, usually 1-2 week long. At the end of each sprint you receive an updated version of the product to check the progress

03 Testing is performed by our team and can include manual testing, automated tests, unit tests created by developers

04 We do regular code reviews and code improvements during the development, to make sure app is easy to scale and maintain

05 Once project is completed, we deploy it for you to hosting if it's a web site or to stores in case of the app

Support
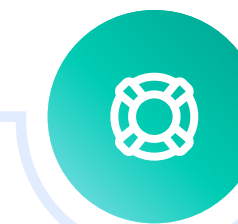

01 After work is done, we remain available for future updates and new iterations

02 We offer several options for you,based on what your plans are. Could be anything between full-time team working on next iterations and fixed amount of hours just to keep app healthy

03 We recommend update your products at least every 6 months to avoid them being outdated

Domains we are best at

Our team is highly experienced and proficient in several business areas. When working with us in one of those areas, you can expect not only high quality of development, but also deep understanding of your internal processes and business needs.

- Developers who understand potential bottlenecks and know how to avoid them
- Project managers who speak your language
- Designers who know your competitors and how to make your product better

CAN'T FIND YOUR BUSINESS IN THE LIST?

Over more than 12 years we have created over 100 products in different industries. We listed the ones we worked with the most, but of course we have experience with much more domains. Let's discuss your specific case to see if our team will be a good fit.

eCommerce

- Online Auctions
- Web and mobile online shops
- Promo Landing Pages
- Stock Management solutions

HealthCare

- Patient transportation
- Medical device management
- Healthcare Landing Pages
- Beauty and Wellbeing solutions

Other Domains

- Life style apps
- Social networks
- Entertainment
- Education and School Management
- Business Landing pages and Web portals
- Etc.

Logistics

- Public Transportation
- Warehouse Management
- Car Rental
- Fleet Management

Clients **Reviews**

Starting from the design team all the way through delivery, the GRT team is responsive and delivers quality results.

Steve Moldenhauer

Co-Founder at NReach Inc.

For an advertising/web business, the site was not mobile responsive. We hired GRT to re-structure the front-end, so it responds well to mobile and tablets. They did a great job in that effort, retaining the design, and adjusting to our requirements. Their work included a design phase where we could see how the site would look in mobile.

Ron Herman

Co-Founder at Team Found

The programmer assigned our company was absolutely fantastic. He was extremely, knowledgeable, friendly & dependable and the work he did has been indispensable to our company. Thank you!

Kyle McLaughlin

Member of the Advisory Board at Enautics

Meet our Team

Approximate team structure for your project.

PM / QA

UI/UX Designer

Front-End Developer

Back-End Developer
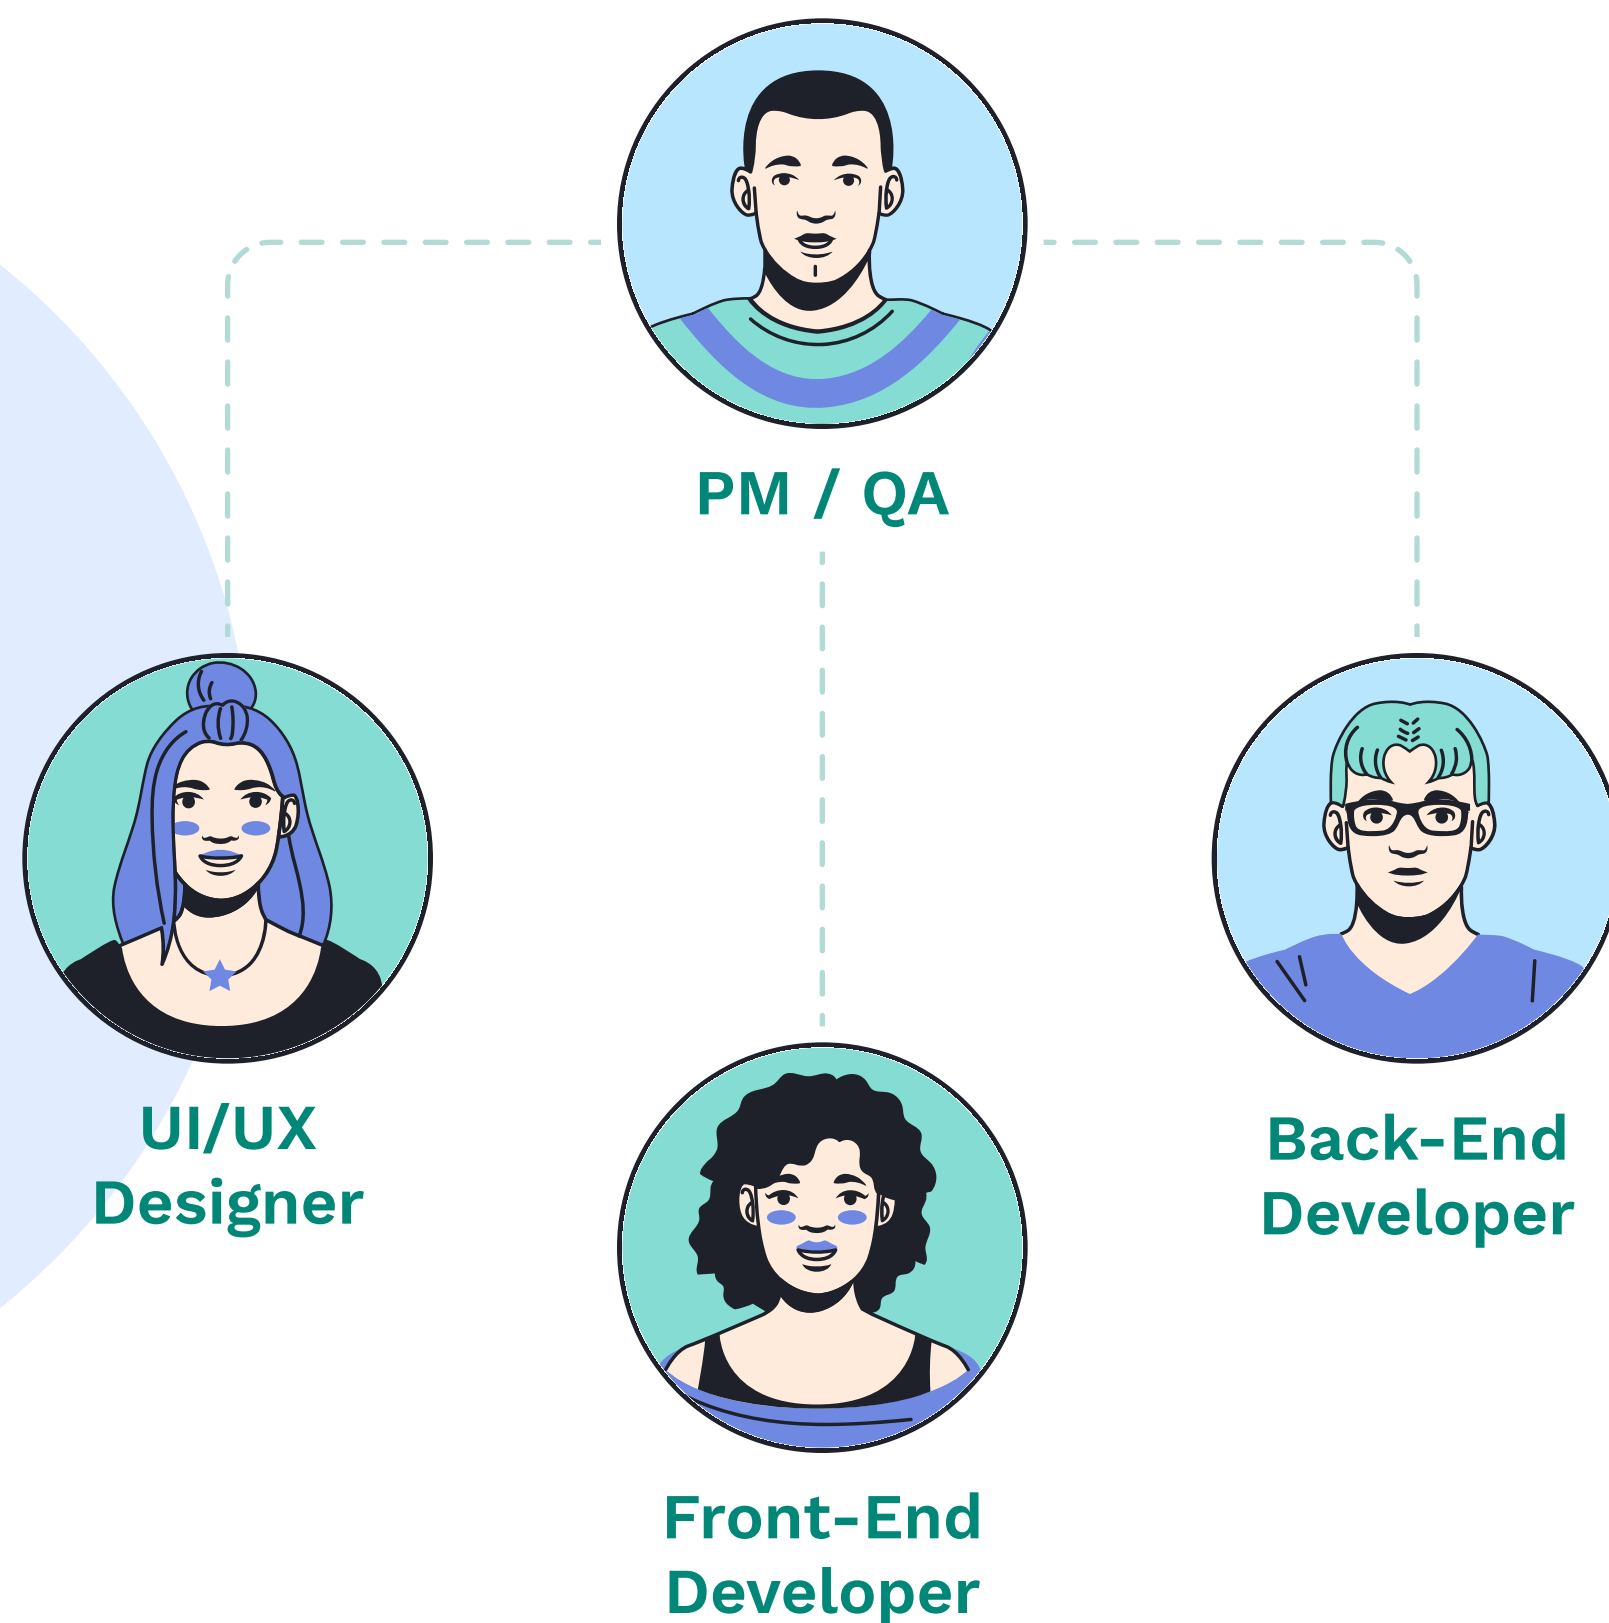

PM / QA

- Main entry point for all client communication

- Performs manual testing and automated testing to guarantee high quality of the product

- Make sure project is delivered on time and within the budget

- For small projects we offer one person for both QA/PM position, as it helps to reduce costs of development without loss in efficiency

Ui/UX Designer

- Create the concept of the future product, analyze best trends and success stories of competitors in your area

- Create wireframes – a schematic representation of your product.

- Build Web/Mobile design of your app, provide all required assets to the developers

Front-End Developer

- Web or mobile developer who build what your users see

- Create product Architecture to make sure app is easy to scale and maintain

- Use latest versions of libraries and frameworks too keep your app up to date longer

- Perform maintenance of built solution and keep it healthy

Back-End Developer

- Responsible for data management, communication of the app with server, security

- Build API and database to gather, store and process data

- Setup server infrastructure and deploy product to your servers

- Provide support for existing solutions

Results of our clients

01 Silicon Valley startup

Halfy Hour idea was to sell leftover meals at discounted price from the local restaurants. They went viral and soon made a great acquisition deal with Kiwi Campus.

02 Easy video presentation for local business

Veezzy is a startup that helps local businesses make video presentations of their business. Have won several awards as a startup of the year.

03 App for people who love art

TheCultivist provide people ability to dive into world of art, offers various services from discounted museum tickets to art training. Is growing constantly in the last 4 years, making partnerships with companies like Capital One.

04 Real Estate SaaS provider

USM is a USA based company that help to start real estate business but providing fully working web site with homes for sale already in it. We helped them to reduce launch time for a new client from several weeks to several hours.

TheCultivist

The world's global art club

FLUTTER AND WEB / USA

01
Problem

The client need to have an infrastructure that provide their users easy access to museums, art events, etc. Solution should be of a very high quality and work seamlesly.

02
Solution

It was decided to start with a Progressive Web Application, that will work great on both web and mobile.

03
Results

As a result of our cooperation, we built not only fully functional web app, but also Flutter mobile application, as well as number of integrations with 3rd party services.

Fertilty Tracking app

App to track period and fertility

FLUTTER / GERMANY

01
Problem

The existing client app had a critical issue. The biosensor device worked well, but the app stopped responding with proper notifications and results. The end-user couldn't take the measurements as they expected.

02
Solution

Client requested immediate fix of the problem and addition of three extra features: handling the sudden disruption, adding a new measurement graphic, and adding a content feed

03
Results

We completed project within 3 months instead of estimated 4 months while also improved bug free rating from 85% to 96% bug free.

Industry	**Client location**	**Period of collaboration**
HealthCare	Germany	2022-2022
Service	**Technologies**	**Timeline**
Mobile App & IoT	IOS/Flutter	3 months

Train Ticketing **App**

Public transportation app

JAVA / UK

01

Problem

The client wanted to expand their reach and become a major player in the train travel market. App had to be completed within 7 months due to government restrictions.

02

Solution

Our main tasks were to implement ticket purchase, Integrate NFC and organize storage of already purchased tickets.

03

Results

All required features were implemented within 6 months, exceeding client expectations, which allows client to push the app to market faster.

Industry	Client location	Period of collaboration
Transportation	**UK**	**2022-2023**

Service	Technologies	Timeline
Mobile app development	**Java, NFC etc**	**6 months**
